(54) Title: FOAM CONTROL COMPOSITIONS

(57) Abstract: Foam control compositions herein can be used in aqueous compositions that are liable to foam. The foam control compositions is added to detergent compositions, particularly detergent powders, to inhibit excessive foaming when the detergent is used in washing. In particular, the foam control composition contains a non-silicon-containing organic liquid, a branched siloxane resin, a particulate filler which is insoluble in the organic liquid, and an additive composition of melting point 35 to 100 °C that is a substantially non-polar organic material which is miscible with the organic liquid.
